- Completed professional development in Database Administration

2019-2023

UNIVERSITY
USM , Chișinău

- I am a part-time student in the 2st year at the university, specializing in Applied Information Science.

2023-2027

PROFILE

My name is Albot Ciprian and I am a second-year student at the University of Moldova, majoring in Applied Informatics. I hold a degree from my previous academic endeavors at CEITI (Center of Excellence in Informatics and Information Studies). In addition to my academic pursuits, I have gained valuable professional experience during my tenure as Data Analytics Manager at Unifun International from March 20, 2023, to date.

In my role at Unifun International, I started as a junior data analyst and quickly progressed to the position of middle data analyst as team leader of the Reporting and Analytics department. My responsibilities included:

Administration of work in the department, checking, and analyzing the quality of task performance.

Administration of the central analysis server, which processes data for all statistical information of the company, and implementing optimization methods for the server and its services and database.

Creating new logical strategies for data aggregation and data synchronization using SymmetricDS.

Developing data aggregation scripts, primarily using Python.

Maintaining and configuring new SymmetricDS synchronizations.

Creating Tableau reports and managing the on-premises Tableau server to ensure seamless performance of the company's service statistics.

Setting up data synchronization between MySQL databases and company servers.

Leading the USSDGW Health Check Java project, developing Java, bash scripts, and the database for the project.

These responsibilities highlight a portion of my significant contributions to the company's success. My experience at Unifun International strengthened my skills in data analysis, database management, and project collaboration.

Following my tenure at Unifun International, I was employed as a Country IT Administrator at Fujikura. In this role, I was responsible for server configuration and maintenance of local networks in Moldova.

Currently, I am a Software Developer at Eximbank, where I am responsible for integrating web and mobile services of the mobile banking application into the bank's core banking system. Additionally, I manage all internal developments within the bank. While I am satisfied with my current position, I am always seeking new opportunities for growth and learning new skills.

I am confident that my skills in data analysis, programming, and problem-solving, combined with my dedication to continuous learning, make me a valuable asset to any organization. I am eager to bring my expertise to new challenges and projects that require innovative solutions. My good communication skills, attention to detail, and commitment to personal and professional growth make me an ideal candidate for your organization.
